All devices connected to wifi but no internet access
2019/08/27

Hello, I have looked at some questions other people have asked that is similiar to mine but I havent found an answer yet. For all of my devices, they all can connect to the internet but I wont have internet access. Nothing that requires internet would work. I live with some other people and all their devices work fine, I find it very peculiar that it is only my devices and all of my devices that dont have internet access. I have a good connection to the internet and I and find that it happns during peculiar times eg. Internet wont work all night but in the morning when someone wakes up it starts working for me again for a while. Are my devices being filtered or something? What can I do th prevent this? I do not have that great of an understanding of netoworking so please let me know if I need to clarify. Thank you
